Project Initialization and Planning Phase

Date	1 October 2026
Team ID	6ab63662000bf9bb96385cb4
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)	I (As) (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An IT Service Desk Agent handling 100+ tickets daily.	Quickly classify and route incoming incidents to the correct assignment group.	I have to manually read each ticket description, determine category, subcategory, and priority, then find the right group.	There is no automated classification system; every ticket requires manual judgment.	Overwhelmed and frustrated, especially during peak hours when ticket volume spikes.
PS-2	An IT Service Delivery Manager responsible for SLA compliance.	Ensure all incidents are resolved within SLA targets and reduce Mean Time To Resolution (MTTR).	Tickets are frequently misrouted to incorrect teams, causing delays and SLA breaches.	Manual classification is error-prone, leading to an average 22% misrouting rate.	Anxious about SLA penalties and concerned about team efficiency and customer satisfaction scores.
PS-3	An end-user (employee) who submitted an IT incident.	Get my laptop issue resolved quickly so I can continue working.	My ticket was assigned to the wrong team twice before reaching the correct group.	The service desk manually routes tickets and sometimes misidentifies the issue category.	Frustrated and unproductive, losing valuable work hours waiting for resolution.
