Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Ticket Submission	Stage 2: Manual Classification	Stage 3: Resolution & Closure
Actions (What does the customer do?)	End-user logs an incident via Service Portal or email. Provides short description and details.	L1 agent reads ticket, determines category, subcategory, priority. Searches for correct assignment group.	Assigned team works on resolution. Agent updates ticket and closes.
Touchpoint (What part of service do they interact with?)	ServiceNow Service Portal Email Integration Virtual Agent	Agent Workspace Incident Form Assignment Lookup	Agent Workspace Knowledge Base Communication Logs
Customer Thought (What is the customer thinking?)	"I hope this gets resolved quickly." "Let me provide enough detail."	"Why is it taking so long?" "I wonder if they understood my issue."	"Finally, someone is working on it." "I hope this doesn't happen again."
Customer Feeling	Hopeful but uncertain	Impatient, frustrated by wait time	Relieved when resolved; annoyed if delayed
Process Ownership	End User / Service Portal Team	L1 Service Desk Agent	L2/L3 Resolver Group
Opportunities (How can we improve?)	- Guided ticket forms - Auto-suggest category - Virtual Agent pre-triage	- Predictive Intelligence auto-classification - Flow Designer auto-routing - Reduce manual effort by 80%	- Auto-suggest knowledge articles - Faster assignment = faster MTTR
