Data Flow Diagram

Date	1 October 2026
Team ID	6ab63662000bf9bb96385cb4
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., End User, Email System).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Classify Ticket, Route Incident).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Incident Table, ML Model Store).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Level 0 - Context Diagram

External Entities:

1. End User - Submits incidents via Service Portal or email
2. IT Service Desk Agent - Reviews classified tickets, handles exceptions
3. Email System - Inbound email creates incidents

Central Process:

[P0] Auto Ticket Classification System

Data Flows:

End User ---(Incident Details)---> [P0]

Email System ---(Inbound Email)---> [P0]

[P0] ---(Classified & Routed Ticket)---> IT Service Desk Agent

[P0] ---(Notification)---> End User

Level 1 - Detailed DFD

Processes:

[P1] Receive Incident - Captures ticket from Service Portal/Email

[P2] Predictive Classification - ML model analyzes short description

[P3] Flow Designer Routing - Assigns category, priority, assignment group

[P4] Confidence Check - Validates prediction confidence threshold

[P5] Notify & Update - Updates incident record, sends notifications

Data Stores:

[D1] Incident Table (sn_incident) - Stores all incident records

[D2] ML Model Store - Trained Predictive Intelligence classification models

[D3] Assignment Group Table - Maps categories to resolver groups

[D4] Historical Training Data - Past classified tickets for model training

Data Flows:

End User ---(Short Description, Details)---> [P1]

[P1] ---(Raw Incident)---> [D1]

[P1] ---(Ticket Text)---> [P2]

[P2] <---(Trained Model)--- [D2]

[P2] ---(Predicted Category, Confidence Score)---> [P3]

[P3] <---(Group Mapping)--- [D3]

[P3] ---(Classification Result)---> [P4]

[P4] ---(If confidence >= 80%)---> [P5] (Auto-assign)

[P4] ---(If confidence < 80%)---> IT Agent (Manual Review)

[P5] ---(Updated Incident)---> [D1]

[P5] ---(Notification)---> End User
