Solution Requirements

Date	1 October 2026
Team ID	6ab63662000bf9bb96385cb4
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Solution Requirements

This document outlines the functional and non-functional requirements for the Auto Ticket Classification system built on the ServiceNow platform.

Functional Requirements

Req ID	Requirement	Description	Priority
FR-01	Auto-Categorization	System shall automatically predict and assign Category and Subcategory for incoming incidents using Predictive Intelligence.	High
FR-02	Auto-Priority Assignment	System shall automatically determine incident priority (P1-P4) based on ticket content and impact analysis.	High
FR-03	Auto-Assignment Group Routing	System shall automatically route incidents to the correct resolver group using Flow Designer subflows.	High
FR-04	Confidence Scoring	System shall display a confidence score (0-100%) for each prediction and flag low-confidence tickets for manual review.	High
FR-05	Manual Override	Agents shall be able to override auto-classification and provide correct values, feeding back into model training.	Medium
FR-06	Classification Dashboard	System shall provide a Performance Analytics dashboard showing classification accuracy, volume trends, and misrouting rates.	Medium
FR-07	Model Retraining	System shall support scheduled retraining of ML models using updated historical data.	Medium
FR-08	Email-to-Incident Classification	Incidents created via inbound email shall also be auto-classified.	Low

Non-Functional Requirements

Req ID	Requirement	Description	Target
NFR-01	Classification Accuracy	The ML model shall achieve a minimum classification accuracy.	>= 85%
NFR-02	Response Time	Auto-classification shall complete within acceptable time after incident creation.	< 3 seconds
NFR-03	Availability	The classification system shall be available as part of the ServiceNow instance uptime.	99.9%

NFR-04	Scalability	System shall handle concurrent ticket classification without performance degradation.	500+ tickets/hr
NFR-05	Data Privacy	All ticket data shall remain within the ServiceNow instance; no external API calls for classification.	Compliant
NFR-06	Auditability	All auto-classification decisions shall be logged for audit trail.	Full logging
