Technology Stack

Date	1 October 2026
Team ID	6ab63662000bf9bb96385cb4
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements. Fill out the table below to detail the specific technologies chosen for each component of your architecture and why.

S.No	Component	Technology / Tool	Purpose / Justification
1	Platform	ServiceNow (Xanadu Release)	Enterprise ITSM platform providing the core incident management, workflow engine, and ML capabilities out of the box.
2	AI/ML Engine	ServiceNow Predictive Intelligence	Built-in ML framework for training classification models on historical incident data. No external ML tools needed.
3	Automation	Flow Designer	Low-code workflow automation tool to orchestrate the classification pipeline, trigger actions, and route tickets.
4	Scripting Language	JavaScript (Server-side & Client-side)	GlideRecord API scripting for business rules, script includes, and UI actions within ServiceNow.
5	Front-End / UI	ServiceNow Agent Workspace & Service Portal	Agent Workspace for L1 agents to view auto-classified tickets. Service Portal for end-user ticket submission.
6	Database	ServiceNow Instance Database (MariaDB)	Built-in relational database storing incident records, CMDB data, ML model artifacts, and configuration.
7	Reporting & Analytics	Performance Analytics (PA)	Dashboard and KPI tracking for classification accuracy, ticket volume, MTTR, and SLA compliance.
8	Version Control	ServiceNow Update Sets	Change management and version control for application customizations, flows, and configurations.
9	Testing	Automated Test Framework (ATF)	ServiceNow's built-in testing framework for unit and integration testing of flows and business rules.
10	Integration	REST API / IntegrationHub	For potential future integrations with external email systems and notification services.
