No. of Functional Features Included in the Solution

Date	1 October 2026
Team ID	6ab63662000bf9bb96385cb4
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Functional Features Included in the Solution

This document lists all functional features implemented in the Auto Ticket Classification system.

S.No	Feature Name	Description	Module / Component	Status
1	Auto-Categorization	Automatically predicts and assigns Category and Subcategory to new incidents using PI ML model.	Predictive Intelligence	Implemented
2	Auto-Priority Assignment	Determines incident priority (P1-P4) based on content analysis and predicted impact/urgency.	Flow Designer	Implemented
3	Auto-Assignment Group Routing	Routes classified incidents to the correct resolver group based on category-to-group mapping.	Flow Designer Subflow	Implemented
4	Confidence Score Display	Shows prediction confidence percentage on the incident form for agent visibility.	Agent Workspace Widget	Implemented
5	Manual Override & Feedback	Allows agents to correct auto-classification; corrections feed back into model training data.	Business Rule + UI Action	Implemented
6	Low Confidence Triage	Tickets with confidence < 80% are flagged and routed to a manual triage queue.	Flow Designer Subflow	Implemented
7	Classification Dashboard	PA dashboard showing accuracy trends, volume metrics, misrouting rates, and agent override stats.	Performance Analytics	Implemented
8	Email-to-Incident Classification	Incidents created via inbound email are also auto-classified by the same pipeline.	Flow Designer	Implemented
9	Audit Trail Logging	All auto-classification actions logged to a custom table for audit and compliance.	Script Include + Custom Table	Implemented
10	Scheduled Model Retraining	Weekly scheduled job to retrain PI model with latest incident data.	Scheduled Job	Implemented

Total Functional Features Planned: 10

Total Functional Features Implemented: 10
