Scalability & Future Plan

Date	1 October 2026
Team ID	6ab63662000bf9bb96385cb4
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High/Medium/Low)
1	Model trained only on English-language tickets	Cannot classify tickets submitted in Tamil, Hindi, or other regional languages	Medium
2	Single classification model for all categories	A specialized model per category group could improve accuracy further	Low
3	Confidence threshold is static (80%)	Does not adapt to varying ticket types; some categories may need different thresholds	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Handles ~1,760 tickets/hour on test instance	ServiceNow cloud auto-scales; no bottleneck at enterprise level. Flow Designer runs async.
2	Data Storage	Incident table with 12 months of data (~50K records)	Archival policies to manage growth; index optimization on prediction tables.
3	Performance	Classification in ~1.8 seconds average	Model optimization and caching of frequent predictions for sub-second response.
4	Security	Instance-level security with role-based access	Implement ACLs on prediction logs, encrypt sensitive fields, SOC2 compliance review.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Multi-language ticket classification (Tamil, Hindi support)	Q1 2027	Expand coverage to non-English tickets; 15% more tickets auto-classified

Phase 2	Virtual Agent integration for pre-classification during ticket creation	Q2 2027	Improve classification accuracy by gathering structured inputs upfront
Phase 3	Change Request and Service Request auto-classification (extend beyond incidents)	Q3 2027	Broader ITSM automation; reduce manual effort across all ticket types
Phase 4	Sentiment analysis for automatic priority escalation of frustrated users	Q4 2027	Proactive SLA management; improved customer satisfaction scores
